## Education

---

- Steinhardt School of Culture, Education, and Human Development, New York University** 2008 - 2011  
M.A. in Educational Communication and Technology  
Capstone project: *Aesthetic Perspectives: Museum Learning Through User-Generated Narratives*
- Special Concentrations Department, Harvard University** 2001 - 2005  
B.A. in Interactive Information Design  
Self-designed undergraduate major comprising coursework in computer science, cognitive psychology and visual and information design

## Employment

---

- Associate Research Scholar, Data Science Institute, Columbia University** 2020 - present  
My work at the Data Science Institute on is centered on security and privacy issues affecting journalists and media organizations. Current research projects include work on using cryptography to secure digital publishing through stronger authentication and provenance guarantees, as well as develop novel classifiers for detecting abusive and harassing speech used to censor journalists on Twitter.
- Assistant Director, Tow Center for Digital Journalism, Columbia Journalism School** 2013 - 2020  
My work at the Tow Center centers on student and faculty programming, in addition to organizing our publication workflow. Every semester, I organize a series of workshops and panel events called "Tow Teas" that highlight the skills and issues most relevant to our students as they enter the field. I also collate Tow research findings for faculty use in the classroom, and manage the digital and print publication process for Tow reports. I also coordinate the advising process for the students in our Journalism & Computer Science Dual Degree program.
- Assistant Professor, Columbia University Graduate School of Journalism** 2011 - 2020

As an Assistant Professor, I pioneered the integration of data journalism topics into the Journalism School curriculum—first through 3-session modules in our legacy “Digital Journalism” concentration, and, since 2012, the design and teaching of the first 7-week Data I modules. In these and my spring Data Visualization courses, I have led in the use of flipped-classroom techniques, successfully teaching the basics of Python, JavaScript and web technologies to novices for more than 7 years. I have also co-taught two storytelling-related electives in the School of Engineering, and developed both the journalism seminar “Tactical Technology for Reporting,” and an Investigative Techniques course specifically for our dual-degree students in Journalism and Computer Science.

In addition to my academic research work in information security and privacy for journalists, I continue to develop applied research projects for reporting and publishing, including:

<i>The Political Visual Literacy Project</i> : A mobile app to help journalists identify unfamiliar political imagery from the field in real-time	2019
<i>You Are Here</i> : An experimental, open-source, offline-wireless news distribution system	2016
<i>InfoScribe</i> : A crowd-sourced, computer-human document transcription system for investigative journalism	2014
<i>DataDocs</i> : An interactive graphics framework for web video	2013
<i>Dispatch</i> : A secure, authenticated, anonymous mobile communication and publishing app for journalists	2012

**Senior Programmer, Online News Graphics, *The Wall Street Journal*** 2007 - 2011

I arrived at *The Wall Street Journal* one month before the launch of the iPhone, and departed one year after the launch of the iPad—a transformative period in digital publishing. During this time, I re-engineered the development and deployment process for news graphics across WSJ.com through the creation of data-driven interactives. I also managed all online graphics coverage for the 2008 elections and developed dozens of major custom projects.

**Web Producer, *MediaVast Inc.*** 2006 - 2007

At MediaVast, I developed a scalable, customized slideshow application used across MediaVast properties, as well as a rapid design and deployment process for customized special-event landing pages. In this role I also managed internal and external business relationships, reporting directly to the company CTO.

**Freelance journalist, *The New York Amsterdam News*** 2005 - 2007

In addition to writing 3-5 articles weekly, I authored a four-week cover series called “Poor in New York” that examined the workings of public services through one New Yorker’s interaction with them.
